### **StrionAir Names Dennis Kloster Vice President of National Sales**

May 16, 2005, Louisville, CO – StrionAir, the leader in high-efficiency, germicidal, low-cost air purification systems, today announced that HVAC (heating, ventilation and air conditioning) industry veteran Dennis Kloster has joined the company as Vice President of National Sales. Mr. Kloster will lead StrionAir's direct sales force as well as its manufacturer representatives and solution business partners.

"I am extremely pleased to add Dennis' seasoned experience and leadership to our management team," said Bruce Dawson, President and CEO of StrionAir. "His deep knowledge of the HVAC industry, sales management and key relationships will continue to accelerate StrionAir's already rapid growth and acceptance in the marketplace."

Kloster joins StrionAir with more than 30 years of sales, marketing and business development experience in the HVAC market. Formerly he was Vice President of Sales and Marketing at International Environmental Corporation. Kloster has also held senior-level positions at Nordyne and Familian Northwest Inc.

"I am delighted to join StrionAir's management team," said Kloster. "There is a huge opportunity to bring new products to market that will improve indoor air quality and StrionAir is on the forefront of this technology, literally setting the standard in air filtration."

StrionAir is increasing its sales, marketing and business development efforts in conjunction with its increasing success and market adoption of the StrionAir System.

The StrionAir System offers the world's only germicidal, high-performance, low-pressure air purification system proven by independent third-party tests to improve indoor air quality. It removes and kills airborne pathogens that can lead to respiratory illness and produces a strong and sustained return on investment by reducing HVAC energy and operating costs.

#### **About StrionAir, Inc.**

StrionAir, Inc. is a Colorado-based air purification firm that develops and manufactures high-performance air purification products for commercial and residential applications. StrionAir Systems have been installed in hospital, government, commercial and other facilities throughout North America. The company's patented technology represents the commercialization of groundbreaking research performed at Lawrence Livermore National Labs in the area of enhancing filter performance through electrical force.
