StrionAir and United Security Incorporated Announce Strategic Partnership

Companies Introduce LEED-Certified, State-of-the-Art
Air Purification Technology to Security Market*

NEW YORK CITY – May 22, 2008 – StrionAir, the manufacturer of the only air purification system proven to capture and kill airborne pathogens, and United Security Incorporated (USI), a premier provider of Contract Security Services in the Northeast, today announced their strategic partnership. USI customers, which include government agencies, Fortune 500 companies, manufacturing, healthcare, pharmaceutical and commercial real estate facilities, will now have access to StrionAir’s germicidal air purification system to protect against airborne dangers by using its indoor air filtration technology.

The StrionAir system is the result of more than 20 years of development between government agencies and private groups looking to solve health problems before they become pandemics. StrionAir’s electrically enhanced filtration technology creates an environment that is inhospitable to microbes. No other air filtration provider matches StrionAir’s commitment to providing germicidal solutions for life-threatening diseases. Additionally, businesses can gain cost efficiencies – and points towards U.S. Green Building Council LEED certification – through its energy efficient design.

“We wanted to partner with StrionAir simply because it has the only technology that actually traps and kills pathogens, including Anthrax, SARS, Avian influenza and a host of others,” said James Joly, managing partner, USI. “We work with Chief Security Officers (CSOs), Directors of Facility Management and Vice Presidents of Risk Management across a variety of market segments, and now, USI can provide a multi-platform air purification solution – converging security concerns with an energy efficiency solution.”

“Airborne threats pose major implications on businesses and government, including productivity, health issues, business continuity and risk management.” said Reed Sarver, president and CEO, StrionAir. “With the convergence of Life Safety concerns and USI’s excellent reputation in the security industry, we believe this partnership is the perfect vehicle to introduce effective, energy-efficient germicidal air filtration solutions into the security market.”

USI has offices in New York City and Boston. To learn more about USI, visit: www.usisecurity.com.

About StrionAir

StrionAir is the only provider of air purification technology that captures airborne particles and kills captured pathogens while conserving energy. Confirmed by multiple respected third-party researchers, StrionAir's patented germicidal-filtration system captures up to 10 times more particles than air-filtration systems typically deployed. Most importantly, it inactivates virtually all captured microbes. StrionAir's unique solution is a perfect fit for energy-efficient, green buildings as it ensures near-HEPA efficiency, while maintaining low power consumption – reducing energy use and lowering costs. StrionAir is based in Louisville, Colorado. To learn more about StrionAir's air-purification technology, visit: <http://www.strionair.com>.
